Increase academic achievement and improve social-emotional outcomes with Learning Ally’s research-based reading progress indicator.

Educators agree that more reading is always better. In fact, research shows that reading engagement is directly linked to higher levels of reading achievement¹. Based on an extensive review of Learning Ally reading data, 33 days of reading for 20 minutes per day is a reliable indicator that students are developing the habit of reading and are ready to skyrocket into even higher levels of reading achievement. It’s also a sign that educators are implementing the Learning Ally Audiobook Solution with fidelity. We call this Reading With Frequency.

When students read frequently with Learning Ally, their word exposure increases, their vocabulary expands, and they have access to grade-level texts, allowing them to build full comprehension.

33 days of reading is not the finish line! Around 33 days is merely the tipping point at which we start to see improved social-emotional and academic outcomes for students.

Log in to Learning Ally to monitor progress on your dashboard. You’ll love watching as students move from getting started to Reading With Frequency!
